New Artificial Intelligence Summit Series Begins With Energy

07/31/2024

(AI) continues to transform the United States and the world. To promote and inform rapid advancements in AI and maintain America's global competitiveness, the Special Competitive Studies Project (SCSP), a nonprofit and nonpartisan initiative with a goal of making recommendations to strengthen America's long-term competitiveness in AI, announces the AI+ Summit Series.

The series kicks off with the topic of energy, The AI + Energy Summit, scheduled for September 26, 2024, in Washington, D.C., will bring together policy makers, energy industry leaders, top government and academic energy researchers, and technologists to address the challenges of AI's energy consumption and develop solutions for a resilient and abundant energy future. The event also aims to address the implications of AI and energy for national security and promote partnerships between AI and energy stakeholders.

AI and other emerging technologies can help the United States take the lead in energy areas including maximizing energy efficiencies, discovering new materials, and enabling new forms of power generation. AI also has a role to play in overcoming energy challenges. The Department of Energy (DOE) already uses AI in several areas including advanced computing, emergency response, environmental modeling, climate forecasting, and materials research.

SCSP's recent "Action Plan for U.S. Leadership in Next-Generation Energy," raises many issues related to AI and energy, including recommendations for the government to bring America forward. The AI+ Energy Summit will highlight these and other issues, and promote collaboration to solve problems. The stakes are high; if the U.S. falls short on energy, American adversaries could gain the upper hand in AI leadership, according to SCSP experts.

Visit scsp.ai to learn more about the AI+Energy Summit and the SCSP's Next-Generation Energy Action Plan.
