

8th December 1961.

NOTE FOR DR. H. H. EVERS

I am passing to you for your interest my copy of Louisville's report No:61-12 and R. & D. E.'s comments in File Note 0180. I had particularly asked Southampton to comment on the method and to ask whether, in the event of routine menthol analyses being requested from S. C. L., they would guide me in saying whether this method should be used and S. C. L. equipped with a suitable gas chromatographic apparatus.

It seems to me to be time that you discussed with Kirwan and Felton the make and type of gas chromatograph most suitable for S. C. L. Whether or not it is time to order one can be discussed later, but I would certainly like you to be in the position of knowing exactly what you want and the cost involved.

HDA
(sgd.) H. D. Anderson.
