Dr. Gio B. Gori
National Cancer Institute
Wiscon Building, Room 516
Bethesda, Maryland 20014

Dear Doctor Gori:

As you know, we obtained samples of the cigarettes being tested in the Tobacco Working Group program. As a matter of routine, we smoked some of these for tar and nicotine, and compared our results with those of ORNL. The comparisons are made on the four charts attached for FTC tar, nicotine, puff count, and tar per puff. You will see from the charts that the comparison is quite good, indicating that the ORNL testing procedure seems to be well under control.

Please feel free to pass these data on to the ORNL people, if you think that they would be interested in the results.

With best regards.

Sincerely yours,

H. Wakeham, Vice President
Corporate Research and Development
