Leaf Department.

I am sending you a report (Ref. No. R. 208) which has come from our friends at Bristol who have investigated the claims in the original patent by Sowa that large increases of water to cut tobacco increase the filling power, and I would like to take this opportunity of reminding you that filling power is still a confidential subject and we should be grateful if you would please confine discussion of it to those concerned, and avoid any mention going outside your Company.

Kindest regards,
Yours sincerely,

H. D. Anderson.
