D. Curle,

6-5-95

When I called on Sun. May 28<sup>th</sup> my question was - what (if any) are any lasting effects or concerns I should have if I have smoked 8 packs of these cigarettes? That question did not seem to be answered in the letter I received. The second question I have is will I be advised if my cigarettes prove positive for this chemical OR do I have to have my own analyzed if I want to know? If I could get a reply on those questions it would be most appreciated.

Thank you.

Also this pack was part of A carton - The customer hotline operator said I should let you know that.

I don't want this letter to sound as though I'm trying to find a reason to sue - I've never sued anyone in my life. I do have concerns about this chemical MTC (Does it contain cyanide?) And what can smoking 8 pks of this do. Is that enough to cause corneal, kidney or liver damage? That is what I want answered please.
