Ken,

Please advise disposition of these two DIET tests. We have 7,621 pounds of TP-03-102-B at 904 FC and 12% moisture, 6,015 pounds of TP-03-102-C at 852 FC and 11.8% moisture, and about 1,658 pounds of TP-03-102-C transition material that has very low moisture. These tests were produced on 8-26-03 and will need to be blended off or disposed of within 30 days of the production date or be sent to fumigation and blended off later. All of these items are in filler cans. Thanks for your help.

Regards,

Keith Guy
