It is my understanding that we will be testing at Inbifo some of the 6mg lighters that are expected from Sanyo around June 1. Pete's milestone show July 7 as the date to "begin 6mg Product Integrity tests."

In conversations with Helmut, it is clear that Inbifo has little information this exercise. What are the plans? In particular, do we know how many lighters we should plan to provide, and what tests will be conducted?

Thanks.
