Dear Friedlieb,

I wish to confirm my telex to you of May 2 which said that 15,000 cigarettes for sebaceous gland tests were scheduled to arrive in Hamburg at 6:30 p.m. May 2 on BE 372 airway bill No. 125-5538-4475. I hope that they have been received in good condition.

For your information I am also enclosing a sheet which describes the entire series of samples which were made for Delhi and from which the 15 samples for Ames tests were selected. You also have a copy of our Research Report No. RL 154 which further describes the samples and gives our results for NMFI. In addition, I am enclosing several sheets of analytical results obtained by Delhi on both the tobacco and smoke of these samples. I thought you would be interested in having these data as background information on the samples. Obviously a lot of information has been obtained. Because of this and the range of variables covered by the samples, further characterization by the Ames test and sebaceous gland test seems very worthwhile.

When you have an opportunity we would be grateful for answers to the questions raised in my letter of April 21.

With kind regards,

Yours sincerely,

342

RSW/ps
